

Absolutely. Below is a detailed, website-ready version for Aluminium Extrusion Profiles – Industries We Serve.

Aluminium Extrusion Profiles – Industries We Serve

HG Aluminium Smelters Limited manufactures aluminium extrusion profiles for a wide range of industrial, architectural and engineering applications. With the capability to produce customized sections in multiple alloy series, our extrusion profiles are designed to support demanding applications requiring strength, dimensional consistency, corrosion resistance and surface quality.

Our profiles can be supplied as per customer drawings and technical specifications for use across multiple downstream sectors.

1. Solar Energy Industry

The solar industry is one of the most important end-use sectors for aluminium extrusion profiles.

Typical applications include:

Solar module frames

Mounting rails

Structural support profiles

Panel support systems

Clamp and connector profiles

Tracker-related aluminium sections

Rooftop solar structures

Utility-scale solar mounting systems

Website line:

Aluminium extrusion solutions for solar module frames, mounting structures and renewable-energy support systems.

2. Architecture & Construction

Aluminium extrusion profiles are widely used in modern buildings because of their lightweight nature, corrosion resistance, durability and design flexibility.

Applications include:

Doors

Windows

Curtain wall systems

Façade systems

Partition profiles

Railings

Louvers

Sliding systems

Structural glazing profiles

Building trims and architectural sections

Website line:

Precision aluminium profiles for modern architectural, façade, fenestration and building-system applications.

3. Aluminium Formwork & Construction Systems

Aluminium extrusion profiles are extensively used in reusable formwork systems for mass housing and high-speed construction.

Applications include:

Formwork panels

Wall panels

Slab panels

Beam sections

Corner sections

Structural formwork members

Aluminium formwork accessories

Monolithic construction systems

Website line:

High-strength aluminium extrusion profiles
engineered for reusable formwork and
modern building systems.

4. Industrial Engineering & Machinery

Extrusion profiles are widely used in machinery, automation and engineering because they allow modular fabrication and precise assembly.

Applications include:

Machine frames

Automation structures

Conveyor systems

Assembly lines

Industrial racks

Equipment enclosures

Guide rails

Structural sections

Custom mechanical profiles

Pneumatic and automation systems

Website line:

Custom aluminium extrusion profiles for
machinery, automation and industrial
engineering applications.

5. Automotive & EV Industry

Aluminium plays an important role in lightweighting and modern mobility applications.

Potential applications include:

Structural profiles

Battery enclosure profiles

EV battery tray components

Body frame sections

Chassis-related sections

Crash-management profiles

Seat and interior structures

Roof rails

Heat-management profiles

Commercial vehicle components

Recommended wording:

Aluminium extrusion solutions supporting
lightweight structural, EV and mobility
applications subject to customer-specific
technical requirements.

This wording is safer if you do not yet have
specific automotive OEM approvals.

6. Electrical & Electronics

Aluminium extrusion profiles are suitable for several electrical and electronic applications because of good conductivity, thermal performance and corrosion resistance.

Applications include:

Heat sinks

Electrical enclosures

Busbar housings

LED profiles

Control-panel sections

Electrical cabinet profiles

Power-electronics housings

Cable-management profiles

Electronic equipment frames

Website line:

Aluminium profiles designed for electrical enclosures, thermal management and power-electronics applications.

7. Railways & Transportation

Lightweight aluminium extrusion profiles are widely used in transport systems where weight reduction and structural performance are important.

Potential applications include:

Rail coach profiles

Structural sections

Door and window profiles

Interior rail sections

Luggage-rack profiles

Flooring support sections

Transport equipment

Trailer body profiles

Commercial vehicle structures

Website line:

Lightweight aluminium extrusion profiles for
railway, transportation and mobility
applications.

8. HVAC & Thermal Management

Aluminium extrusion profiles are extensively used in cooling and thermal-control systems.

Applications include:

Heat sinks

Radiator profiles

Cooling fins

HVAC sections

Ventilation profiles

Heat-exchanger components

Thermal-management housings

Air-handling equipment sections

Website line:

Efficient aluminium extrusion solutions for
heat dissipation, HVAC and thermal-
management systems.

9. Cryogenic & Specialized Engineering

Specialized aluminium profiles can be used in low-temperature and advanced engineering environments depending on grade and specification.

Applications may include:

Cryogenic equipment profiles

Industrial gas systems

Structural support sections

Specialized engineering assemblies

Low-temperature equipment components

Recommended wording:

Specialized aluminium extrusion profiles for cryogenic and advanced engineering applications, subject to alloy and customer-specific requirements.

10. Furniture & Interior Systems

Aluminium profiles are increasingly used in modular furniture and interior products.

Applications include:

Modular furniture

Office partitions

Wardrobe systems

Kitchen systems

Display units

Decorative profiles

Interior framing systems

Retail fixtures

Furniture structural sections

Website line:

Sleek, durable and customizable aluminium profiles for furniture and interior systems.

11. Consumer Durables & Appliances

Extrusion profiles are also used in consumer and

commercial products.

Applications include:

Appliance frames

Electronic housings

Refrigerator and freezer components

Display systems

Kitchen equipment

Consumer-product structures

Commercial appliance profiles

12. Defence, Aerospace & High-Performance Engineering

High-strength aluminium extrusion alloys can be suitable for advanced applications requiring strong mechanical properties.

Potential applications include:

High-strength structural sections

Precision engineering profiles

Defence equipment

Aerospace-related structural parts

Specialized high-performance components

For your website, this should preferably be positioned as:

Capability / Potential Applications

unless HG has specific certifications, approvals or actual supply credentials for aerospace or defence.

Direct Customer Segments

For extrusion profiles, the direct customer can be:

Solar module manufacturers

Solar structure manufacturers

Aluminium system houses

Architectural fabricators

Formwork manufacturers

Industrial equipment manufacturers

Automotive component manufacturers

Electrical equipment manufacturers

Railway and transport companies

Furniture manufacturers

General engineering companies

Aluminium Extrusion Profiles – Built for
Performance Across Industries

HG Aluminium Smelters Limited manufactures

precision aluminium extrusion profiles for diverse industrial and commercial applications. Our extrusion capabilities support standard as well as customized profiles manufactured as per customer drawings, technical specifications and application requirements.

Industries served include:

Solar Energy

Architecture & Construction

Aluminium Formwork

Industrial Engineering

Automotive & EV

Electrical & Electronics

Railways & Transportation

HVAC & Thermal Management

Cryogenic Applications

Furniture & Interiors

Consumer Durables

Specialized Engineering

Short Industry Descriptions

Solar Energy

Profiles for solar module frames, mounting rails and structural support systems.

Architecture & Construction

Profiles for doors, windows, curtain walls, façades, partitions and architectural systems.

Aluminium Formwork

High-strength extrusion profiles for reusable formwork and monolithic construction systems.

Industrial Engineering

Customized profiles for machine frames, automation, conveyors and industrial structures.

Automotive & EV

Lightweight structural profiles for mobility and electric-vehicle applications.

Electrical & Electronics

Profiles for heat sinks, electrical enclosures, LED systems and power electronics.

Railways & Transportation

Lightweight profiles for structural and interior transport applications.

HVAC & Thermal Management

Profiles designed for cooling, heat dissipation and ventilation systems.

Furniture & Interiors

Decorative and structural profiles for modular furniture and interior systems.

Specialized Engineering

Custom profiles for technically demanding industrial and precision applications.

Homepage Short Version

Aluminium Extrusion Profiles

Serving Solar, Architecture, Construction,

Formwork, Industrial Engineering, Automotive, Electrical, Railways, HVAC and Furniture industries.

Recommended Main Icons on the Extrusion Page

For the website, I would keep 8 main icons:

Solar Energy | Architecture & Construction |
Aluminium Formwork | Industrial Engineering |
Automotive & EV | Electrical & Electronics |
Railways & Transportation | HVAC & Thermal
Management

Then below, show Furniture, Cryogenic, Consumer Durables and Specialized Engineering under “Other Applications”.

This will make the website look more focused and professional rather than showing too many

industries at once.
