

Industries We Serve

HG Aluminium Smelters Limited operates across the aluminium value chain through its portfolio of aluminium ingots, homogenized billets, extrusion profiles and specialized aluminium products. Our products support customers across multiple downstream industries, from renewable energy and construction to engineering, electrical and metal-processing applications.

1. Solar Energy

HG aluminium products support the growing solar sector through extrusion profiles used in:

Solar module frames

Rails and support systems

Structural aluminium sections for solar projects

2. Architecture & Construction

Our aluminium extrusion solutions are suitable for a wide range of architectural and construction applications, including:

Doors and windows

Curtain wall systems

Façade profiles

Partition systems

Railings

Structural aluminium sections

Building and construction profiles

3. Aluminium Formwork & Building Systems

HG supports modern construction systems through aluminium products used for:

Monolithic formwork systems

Formwork panels

Structural formwork profiles

Reusable aluminium building systems

Large-scale residential and infrastructure construction

4. Industrial Engineering & Machinery

Our extrusion profiles are used in various industrial and engineering applications such as:

Machine frames

Automation systems

Conveyor structures

Industrial equipment

Mechanical and engineering sections

Customized aluminium profiles

5. Electrical & Power

HG aluminium products support the electrical and power sector through applications such as:

Electrical profiles

Heat sinks

Electrical enclosures

Conductive aluminium sections

Power transmission-related applications

Industrial electrical components

6. Automotive & Transportation

Aluminium offers lightweight, corrosion-resistant and high-performance solutions for transportation applications. Potential applications include:

Automotive structural profiles

EV-related aluminium sections

Trailer and transport profiles

Lightweight engineering components

Vehicle body and structural applications

7. Railways & Transport Systems

Our extrusion capabilities can support transportation and railway applications including:

Structural aluminium profiles

Transport equipment sections

Rail and guide profiles

Lightweight engineering components

Customized transportation profiles

8. HVAC, Thermal & Cryogenic Applications

Aluminium profiles are widely used in thermal-management and specialized engineering applications, including:

Heat sinks

Cooling profiles

Ventilation sections

Thermal management systems

Cryogenic-related aluminium applications

HG extrusion profiles can be used in:

Modular furniture

Office partitions

Decorative profiles

Interior systems

Display systems

Customized furniture sections

10. Aluminium Extrusion Manufacturers

This is the primary customer segment for our

Aluminium Billets.

HG manufactures homogenized aluminium billets designed as raw material for aluminium extrusion manufacturers producing profiles for:

Solar

Architecture

Industrial engineering

Automotive

Electrical

Transport

General engineering applications

Recommended website line:

Our homogenized aluminium billets are engineered for aluminium extrusion manufacturers seeking consistent chemistry, reliable extrusion performance and quality surface finish.

11. Foundry & Alloy Manufacturing

Our aluminium ingots and alloy products can cater to:

Aluminium foundries

Alloy manufacturers

Remelting units

Casting industries

Secondary aluminium processors

General engineering foundries

12. Cable & Electrical Industry

Specialized aluminium products can serve applications in:

Cable manufacturing

Electrical conductor manufacturing

Aluminium-based electrical products

Power and transmission applications

13. Steel & Deoxidizer Industry

HG's specialized aluminium products such as Aluminium Cubes, Aluminium Shots, Notch Bars and Deoxidizer Products can be positioned for:

Steel manufacturing

Deoxidation applications

Ferro-alloy and metallurgical processes

Steel mills

Metal treatment applications

14. Aerospace, Defence & High-Performance Engineering

Selected alloy capabilities may support high-strength and precision applications in:

Aerospace components

Defence engineering

Precision extrusion

High-strength alloy applications

Advanced industrial engineering

For the website, this should preferably be described as “Capability / Potential Applications” unless specific aerospace or defence approvals/certifications are already available.

15. Global Aluminium & Export Markets

HG Aluminium Smelters Limited also serves and targets international markets through:

Export customers

Aluminium processors

Metal traders

Industrial buyers

Global sourcing and procurement partners

Recommended Main Industry Cards for the Website

For a clean homepage layout, I would suggest showing these 9 industry cards:

1. Solar Energy

2. Architecture & Construction

3. Aluminium Formwork

4. Industrial Engineering

5. Electrical & Power

6. Automotive & Transportation

7. Railways & Transport

8. HVAC & Cryogenic

9. Foundry, Steel & Metal Processing

Product-to-Industry Mapping

Aluminium Billets

→ Aluminium Extrusion Manufacturers

Aluminium Extrusion Profiles

→ Solar, Architecture, Construction, Industrial Engineering, Electrical, Automotive, Transport, HVAC, Furniture

Aluminium Ingots / Alloy Ingots

→ Foundry, Casting, Alloy Manufacturing, Secondary Aluminium Processing

Aluminium Cubes / Shots / Notch Bars /
Deoxidizer Products

→ Steel & Deoxidation Applications

Suggested Website Heading

Industries We Serve

Suggested Intro:

From renewable energy and construction to engineering, transportation, electrical systems and metal processing, HG Aluminium Smelters Limited delivers aluminium solutions designed to meet diverse industrial requirements. Through our integrated portfolio of aluminium ingots, homogenized billets, extrusion profiles and specialized aluminium products, we support manufacturers across multiple downstream

sectors.

You can give this directly to the developer as the base content for the Industries We Serve section.
